

TimberTec
A GENII COMPANY

SIPAL
PACKAGE
LOGISTICS
NEVER LOOK FOR PACKAGES
AGAIN

SIPAL OPENS A VARIETY OF OPTIMIZATIONS

Keeping track of all packages is a very time-consuming task and makes the daily work of forklift drivers more difficult.

The locations of packages are often recorded on paper or digitally. SIPal takes care of this localization at the push of a button and visualizes tasks, stock and everything related to timber packages.

EXACT LOCATION OF
EVERY PACKAGE AND
INVENTORY

20% MORE EFFICIENCY
IN INTRALOGISTICS

SIPAL OPTIMIZES PACKAGE LOGISTICS WITH RFID TECHNOLOGY. EFFICIENT PACKAGE LOGISTICS WITH GRAPHICAL OVERVIEW.

KEY FUNCTIONS IN SIPAL

Graphical user interface

A graphical interface gives the user a unique overview of all packages

Developed for forklifts

SIPal is made to use in forklifts and wheel loaders

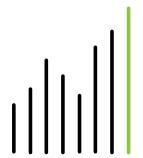

Configurable

SIPal can be easily adapted to customer needs

Complete

All functionalities for packages management is available in SIPal

Always available

SIPal has built in buffering to handle network disruptions. Full network coverage is not needed

KEY FUNCTIONS IN SIPAL

INCREASED EFFICIENCY

No time and diesel is wasted on search for packages. SIPal always knows where all packages are and what to do next with them.

EASIER TO COOPERATE

All forklifts have the same information and can easily help each other.

INCREASED STOCK TURNOVER

Age and exact location of packages is used to deliver right packages.

BETTER STOCK UTILIZATION

Dynamic storage location for products increases stock utilization.

STOCK SECURITY

If packages are in SIPal you will also be able to find them.

LESS PERSONAL DEPENDENCY

Easier for new personnel to get started.

BETTER FORESIGHT

With more information it's easier to work proactive.

LESS PACKAGE MOVEMENTS

The need to move packages can be decreased by >20%.

REDUCED INVENTORY DAMAGE

Less package movements reduces the risk of inventory damage.

INVOLVEMENT

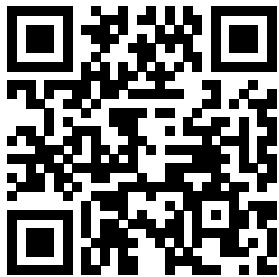

Easier to involve personnel and improve processes.

WHAT DO OUR CUSTOMERS SAY

SÖDRA WOOD

TiCom ERP and SIPal package logistics in use at Södra Wood in Långasjö, Sweden. Södra is one of Sweden's largest forestry and timber industries with a softwood lumber production of around 2 million m³/year.

HARDWARE FUNCTIONALITIES

Picture 1:
Forklifts are equipped with antennas. When picking-up or dropping-off packages, the antenna interacts with the transponders and locates the actual storage.

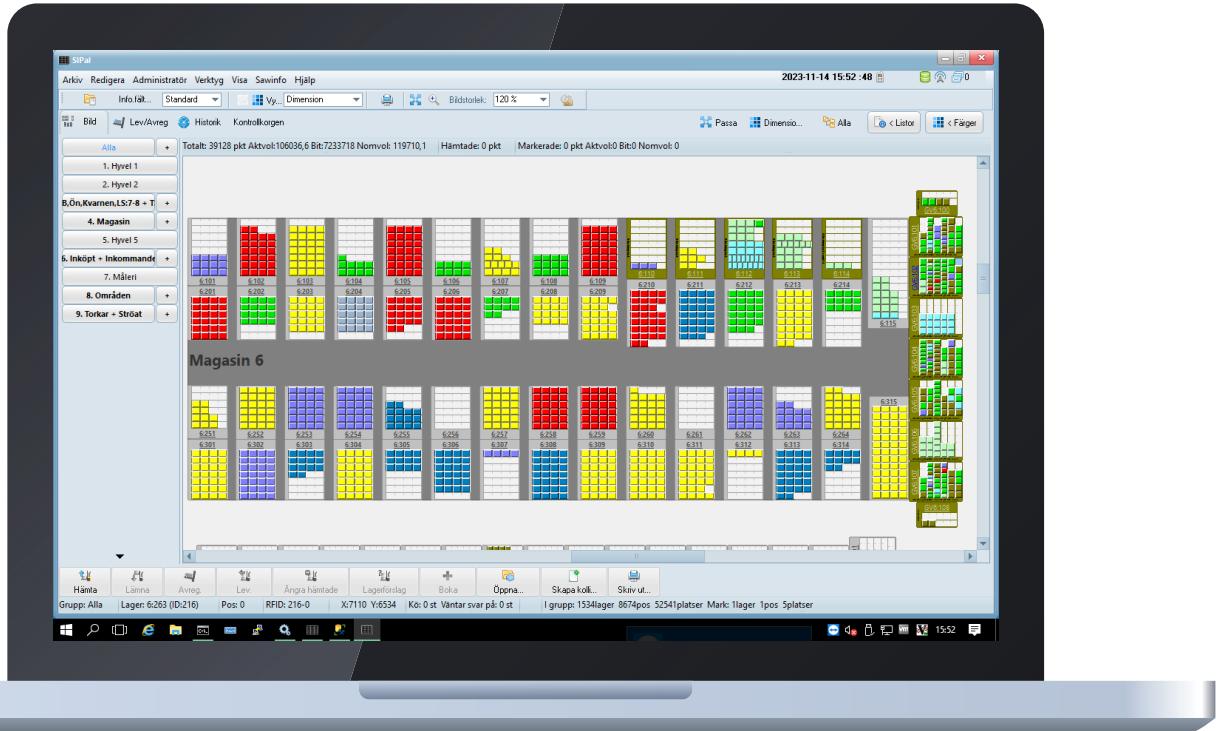

Picture 2:
2 types of antennas - mounted on forklifts , a RFID-reader (connected to antenna and computer in forklift) and
3 transponders (size as AA batteries). The transponders are positioned in the ground below every storage-space.

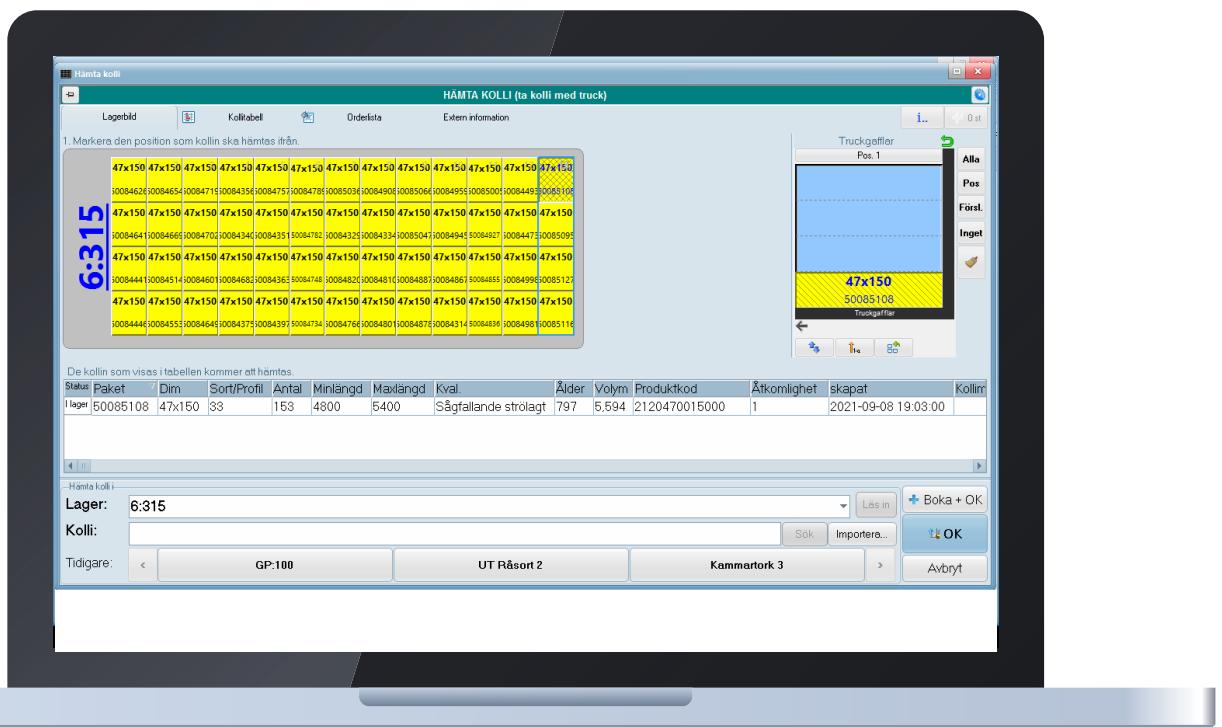

Picture 3:
Forklifts are equipped with monitors, making it easy for drivers to visualize all the stock-locations, packages and open tasks.

GRAPHICAL OVERVIEW

Picture 4:

Overview of different storage-places, in areal view. Each column represents the cross section of the packages. Package color can be customized to give simple visual information about the packages.

Picture 5:

Detail view of specific stock-location. It shows all packages as well as from which side the packages can be reached. The packages are logged in the individual stock-locations and on the forklifts.
